

1

First, build a cross out of your LEGO bricks. Just 5 bricks will do the job, but you will need 3 crosses in all.

2

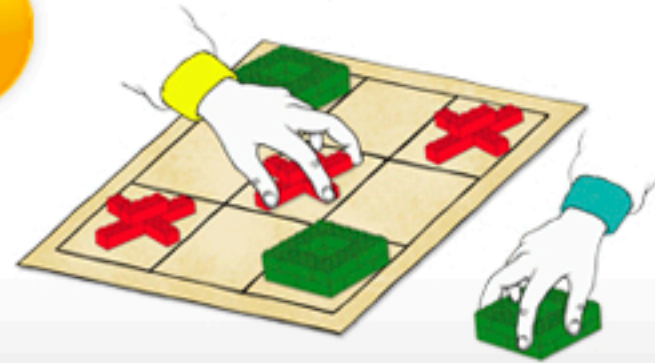

Now you need to build the squares. Again 3 of them.

3

Then take a piece of paper and draw 3x3 squares that are big enough to contain the crosses and squares.

4

Now you can start playing - the first player to get three in a row wins.
